Skill Foundry

Current working plan | Review copy 1 | 5 October 2026

A page that makes every skill understandable

Open a skill in Anchor, understand what it does, navigate the material it relies on, and follow the actual steps it runs. Record what happens on real jobs so its documentation and future improvements stay grounded in use.

Where the campaign stands

The new Foundry page and researchPrime's first refinement have been safely landed. The restarted page renders researchPrime's Library and source viewer. ResearchPrime remains open for your feedback; Gandalf's Library and maps are being built next. The overall sequence is already authorized; there is no new plan approval blocking that work.

Next, in this order

Order / product	Current state and next act
1. researchPrime	Review the available Library, knowledge map and process map; refine this same product from your feedback.
2. Gandalf	Build the first documented walkthrough, verify the links and behavior claims, then bring it to you for its own feedback.
3. Aladdin-Lamp	Document the steward that manages one effort's dialogue, decisions, work and delivery.
4. Aladdin-Cave of Wonders	Document the steward that coordinates projects and the portfolio.
5. Aladdin-Star Chart	Document the steward that explores goals and organizes the wider direction.
6. Remaining skills	Work through the rest one at a time, using the same Library and map structure.

The three steward functions stay separate. Their visible names and icons follow the selected Aladdin, Jarvis or Ecgberht persona. The names above incorporate your 5 October correction.

What every skill will contain

A common structure, with each skill's actual sources and behavior.

Component	What you should be able to inspect
Purpose and navigation	A clear explanation of the skill, followed by expandable sections and direct access to its instructions, programs and records.
Library	Reusable material, references, other skills and tools. Every resource opens. 'Frequently used' must be supported by real-use records; otherwise its frequency stays unknown.
Knowledge map	Navigate ideas and relationships into their Library resources. Distinguish an initial arranged map from geometry actually learned from recorded use.
Process map	Follow the entry point and first action, program steps, model calls and agent jobs; see interim reports, human feedback, adversarial checks, and final outputs.
Depth and stopping rules	See how effort and regular/Heavy depth are selected, how many review rounds can run, what triggers retries, and what causes the workflow to finish or stop.
Sources and disagreements	Open the exact instructions or code behind a claim. Show disagreements between them. Actual run receipts establish model/family participation; a label alone does not prove independent review.
Use and improvement records	Connect real jobs, outputs and named shortfalls to the existing skill journal and improvement pathway. Keep human decisions and version history recoverable.

The shared work across the whole map

Keep the page, Libraries, process maps, usage records and knowledge maps working together through Anchor. Check each product separately and preserve its feedback. Usage-derived Poincare maps remain a research question until real records support their behavior; displaying a seeded map is not evidence that learning has occurred.

Stargazer remains proposed

The idea of a skill that ruminates and finds less obvious ways of seeing things is retained in the existing roadmap. It does not interrupt the authorized documentation sequence or authorize a new skill engine.

How we review and improve

Useful delivery first; acceptance belongs to you.

Each product has its own review

Check	What establishes it
Source grounding	Behavior claims lead to current instructions, code or actual run evidence; missing or conflicting evidence remains visible.
Working navigation	Library resources, knowledge-map links and process-source links open the intended content. Inspect desktop and phone layouts on the reading surface you use.
Independent checking	Apply the existing stakes and selected-family policy; record who actually checked. Do not describe same-family review or missing participation as independent verification.
Cumulative feedback	Keep the initial draft and successive refinements under the same product. Carry forward your earlier requirements and preserve the prior version.
Your acceptance	A passing test or a finished build does not accept the product. Close a slice only when you explicitly say to do so; one unfinished review does not block independent authorized work.

Continuous improvement through real use

Real job	Record result	Name the gap	Target a change	Verify again

Document and connect the existing capture and improvement infrastructure first. A new engine or construction wave needs a current real-use record that shows a named shortfall and the appropriate scoped authorization. The present work does not authorize a new training service or an unlimited agent swarm.

What to comment on in this copy

Refer to a page number and a component or skill name. Tell me if the order, missing material, process detail, navigation or review criteria should change. I will carry that feedback into this same plan and its visible roadmap while the already-authorized skill population continues.

Version and scope

This is a readable review copy of the existing working plan and your October 4'5 instructions, with the settled steward names. It is not a new effort or a claim that the remaining walkthroughs are finished. The older page plan v1.1-candidate and mockup v7 remain historical foundations; no product is accepted by this export.
